NTCC Report of website

Meetyourneed.in

OVERVIEW

About our organization

This website is developed as startup project by **Kunal dubey**, student of **Amity School of Engineering & Technology** with a central idea to help the rural area people from different areas of country. The Organization is very clear with the noble motive to help people without any Profit.

What problem are we trying to solve?

We are trying to solve the problem of unemployment and helping in promotion of small scale business. I know it is already being done in most of popular states of our Country. But our Aim is to bring the rural area people close to this growing nation.

The basic theme of this project is to collect all the small dealers, Qualified & Unqualified Workers & other higher graduates of young generation who are unemployed. We aim to collect the credentials of these groups and give them a platform from where they can directly meet their job.

Secondly we aim to collect the details of transport dealers of different cities and provide them a platform to submit their transport details and we will try to give them a tender on the daily basis.

Apart from all these we are trying to connect the government tenders of lower region people where big industrialist is not willing to do work due to lack of transport and hydraulics.

High-level project scope

The currently estimated target of help at least poor people of some nearby states like Jharkhand, Bihar, Chhattisgarh etc. and later on the spread it throughout the country.

Target market

Now the main target of this project is help all of the mentioned people by connecting them all together. Dealers will be getting tenders on the daily basis with their transport submitted to us. The workers will get their job in these transport as drivers, staff, and area Manger. Other than this those contractors who are denying to take tenders in these rural area will be helped with all those equipment's and hydraulics facilities.

PROJECT TEAM

A list of ¹the decision makers involved in the project & their contact details are:

- Kunal Dubey – CEO – Dubeykunal8@gmail.com
- Ashish Dubey – Marketing Manager – ashishkd94@gmail.com

Goals

The main motive of this project to create a platform of employability for the rural area of our country and organize them with whatever resources they have. We try to create a database of all those people who have transport, who are in need of job both skilled and unskilled workers.

We design separate platform for both of the groups of people i.e. those who are in need of job and secondly those want to hire transport, or workers.

Our target is providing the poor, unemployed youth as well as skilled workers job as per their qualification and ability.

PHASES

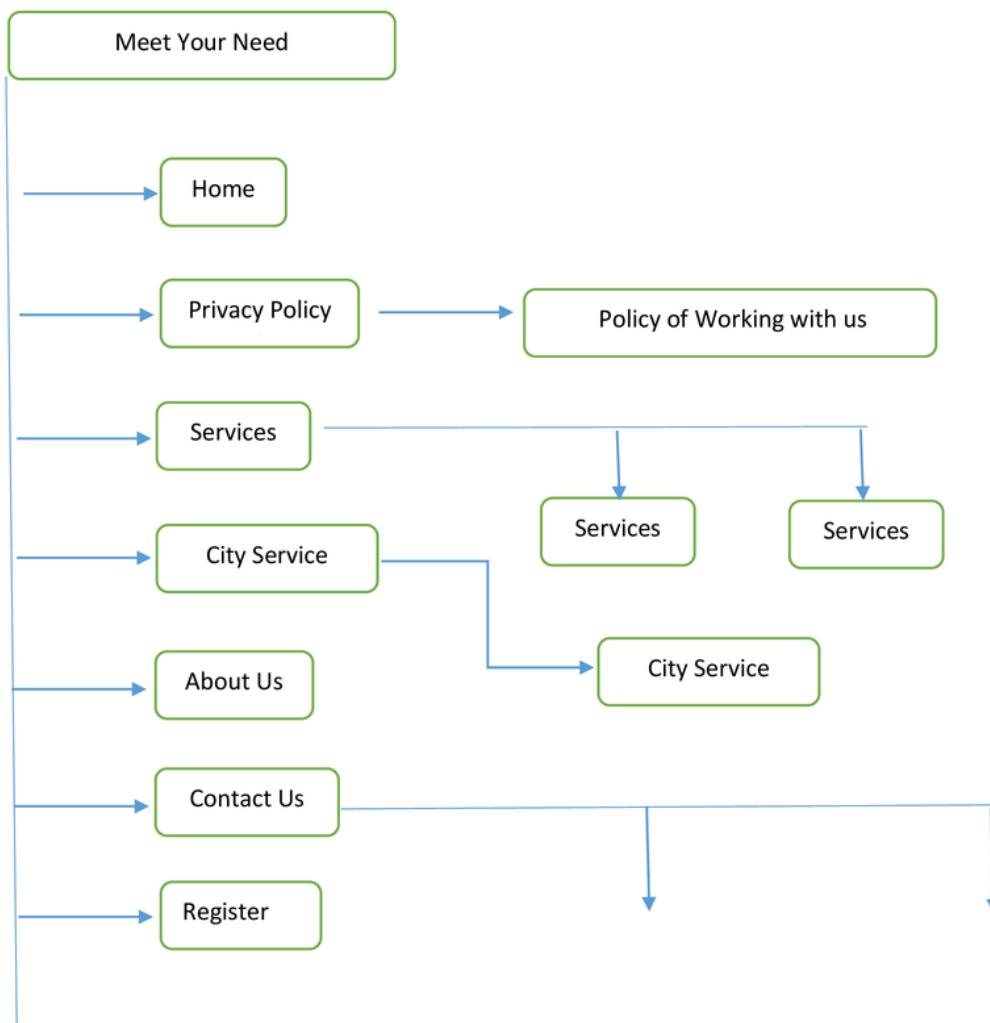

These phases show the current status of the project as well as its growth & scenario to indicate where this project fits in different areas of market.

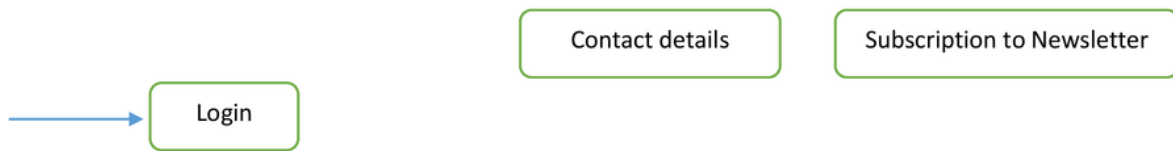

- Phase 1 – Basic marketing website – Current project
- Phase 2 – Education Courses
- Phase 3 – Worldwide connections
- Phase 4 – Weather Forecasting for the farmers.

CONTENT STRUCTURE

The content structure & mapping of Our site is as shown below:

Site map

Content types

Homepage

The content type included in homepage is all the basic description of site mapping and some of the strong features of site like searching dealers in any city. Submission of your working ideas along with some of educational courses links. Reasons to discover our site and enjoying all of our services. Apart from them we have our awesome flaws including transport like hydraulics, and some other heavy luggage shifting vehicles.

Privacy Policy

Now moving towards all services which people are going to get within this site along with some customized city services.

Services

All of Our services provided to the viewers are free of cost i.e. Not a single penny investment in promotion and exploring us. We provide you all of your ultimate requirements like Employability, transport, Educations and many other facilities for all class of workers starting from unskilled to semi graduates.

City Service

City service includes the Promotion of business for the small scale companies as well as the customers with a search page where they can search transport and dealers within their own cities. We Provide a separate page for the workers to upload their credentials and expected salary for their work.

Subscription to Our newsletter is the most important feature of this page with the contact details. the viewers can also submit their issues and problems faced while exploring our site. A complete details of site owner and the CEO of this organization is available for the customers for any critical case /discrepancies.

Login

Login page include the Login credentials for only those visitors who already have an account on this site in any mod. The credentials used while login to your account is

Input Parameters

- Username
- Password

Register

The register page is different for different Users viewing this site. For dealers this page is activated only when they already have login id. the content type details used while registering your business are:

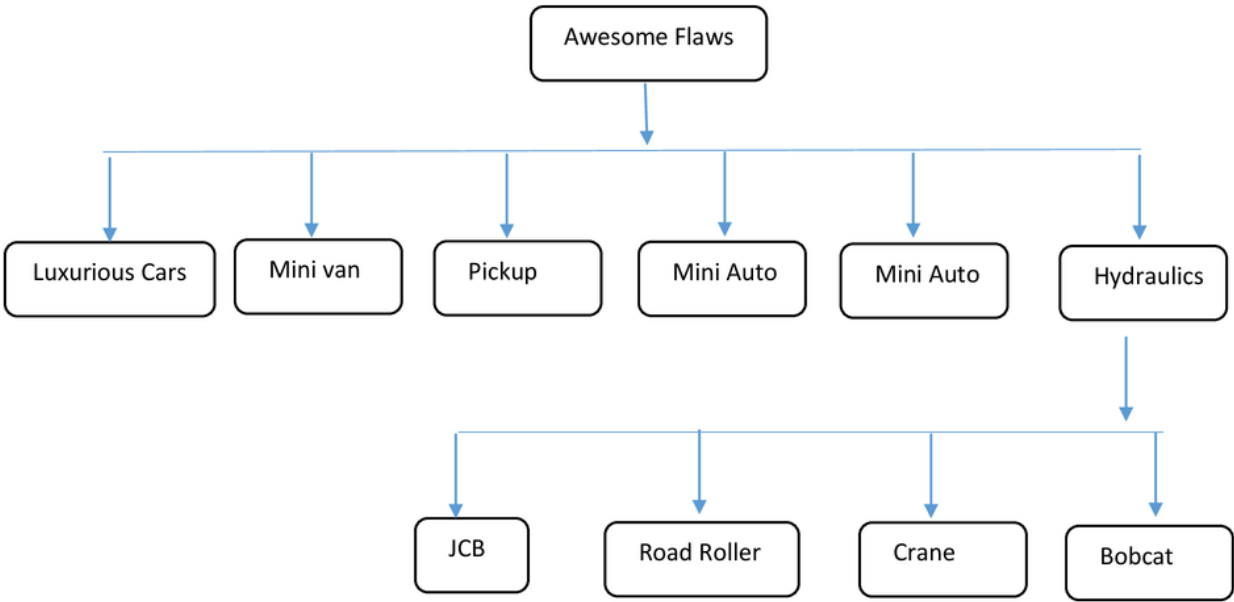

Input Parameters

- Full Name
- Email
- Phone Number
- Alternate Phone Number
- Country
- City
- Owner Address
- Vehicle RC Number
- Description of transport and their Number provided for service
- Images if Possible

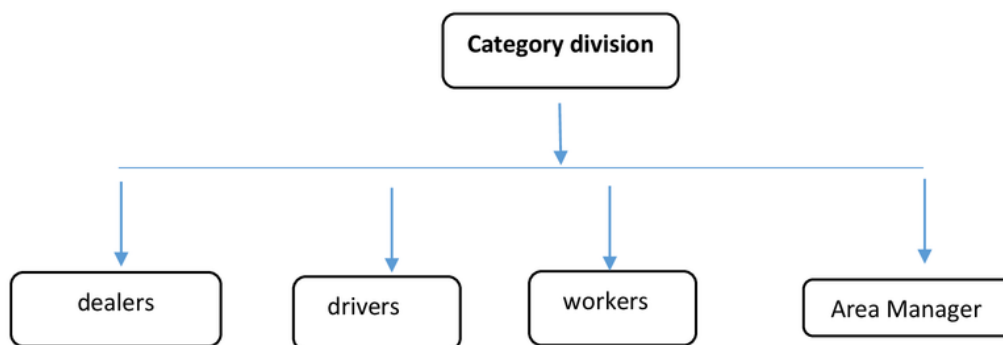

Taxonomies

The taxonomies available for the users/viewers who are exploring this site are:

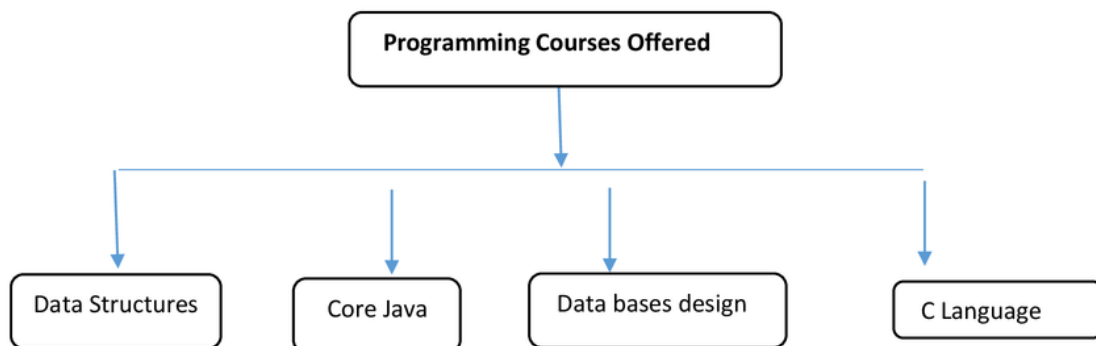

❖ **Transport Facilities**

❖ **Workers Categories**

❖ **Education courses**

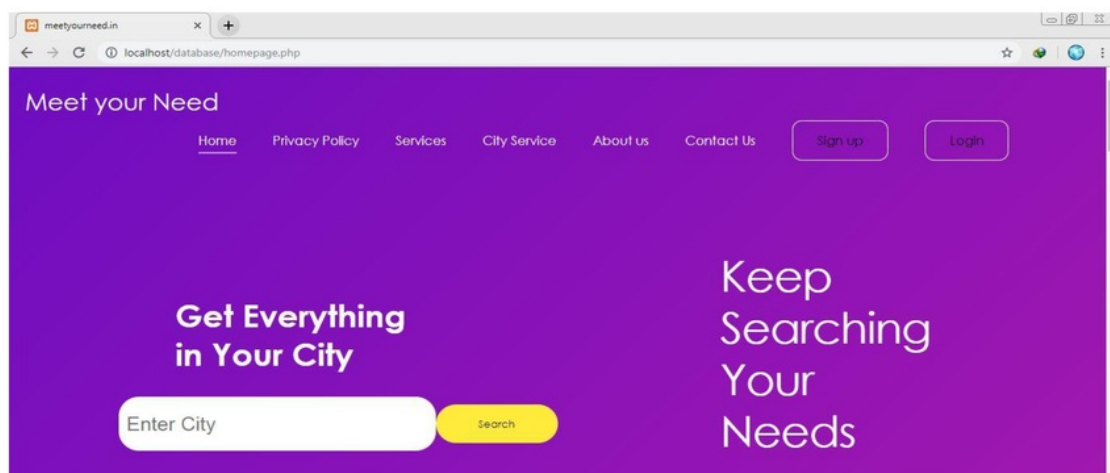

Functionality

➤ Search Box

Search Box include a title “Get everything in Your city” which defines its meaning itself. this search box is made for every type of visitors to this site who are need of any transport facilities or some job availability.

The box includes a **<input field>** for getting city name by the user and a Search **<button>** for submitting the data. The search button when clicked will immediately send this data for checking whether City typed is in present in the database or not.

Specifications & conditions applied

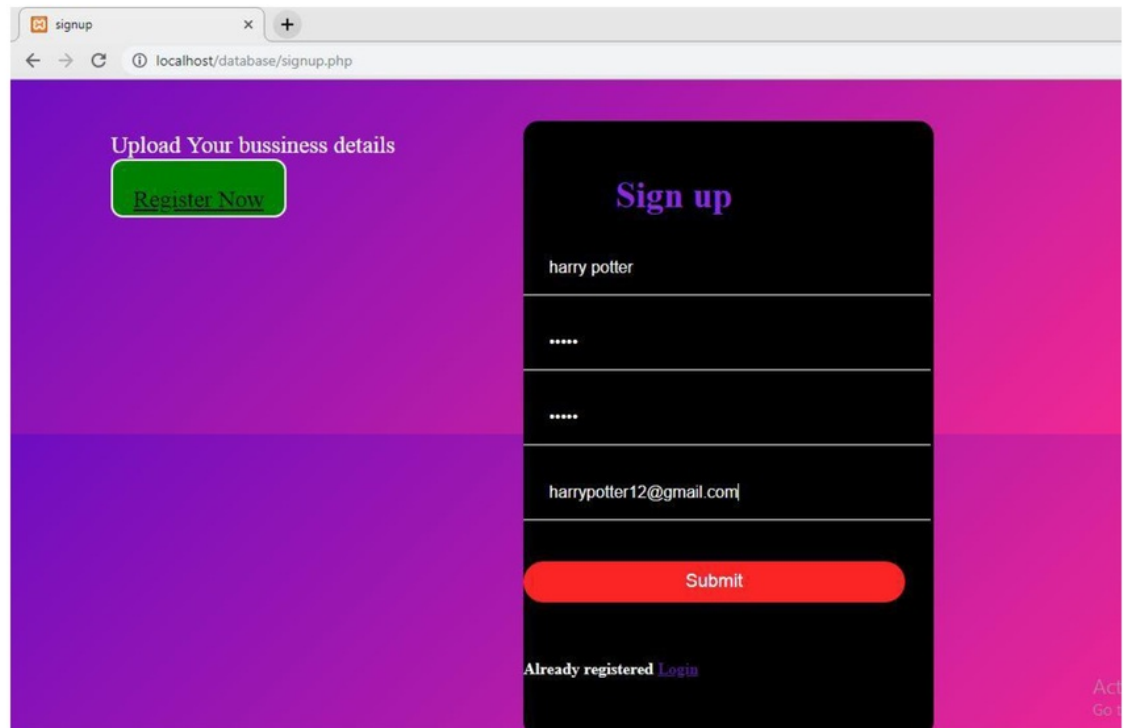

- If not found it will display the message for inconvenience of viewer and availability of services in those cities.

- But if Transport dealers have already registered in those cities it will display their details

➤ Sign up

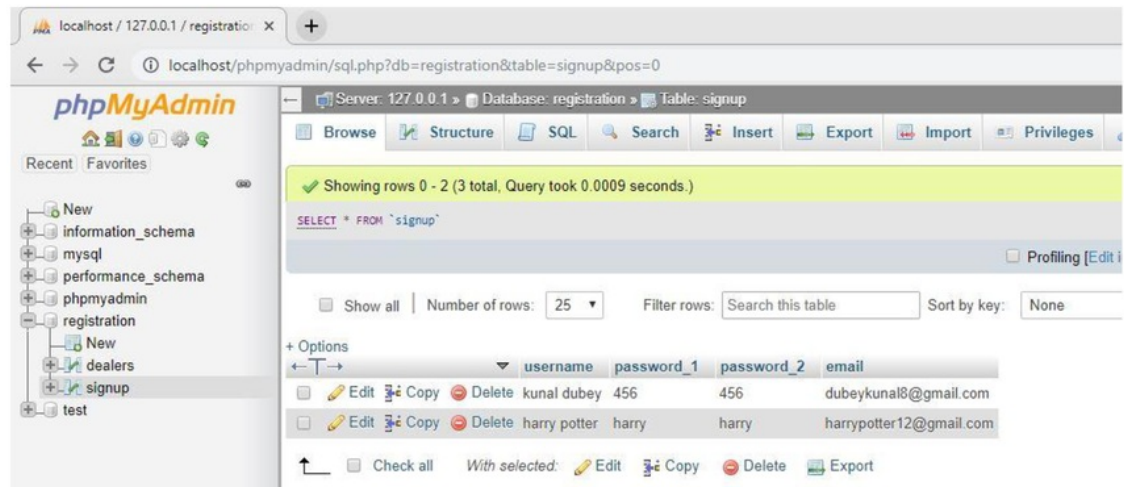

The signup facilities are for every type of users whether they are dealers, customers or workers. It acts like a license to explore the different facilities of this site. The signup facilities will give them a freedom to register their business on our site and upload their credentials.

The sign up page form has link asking to the user **“Already Registered”** then Click to this link **“Login”** which will redirect the user to the Login page.

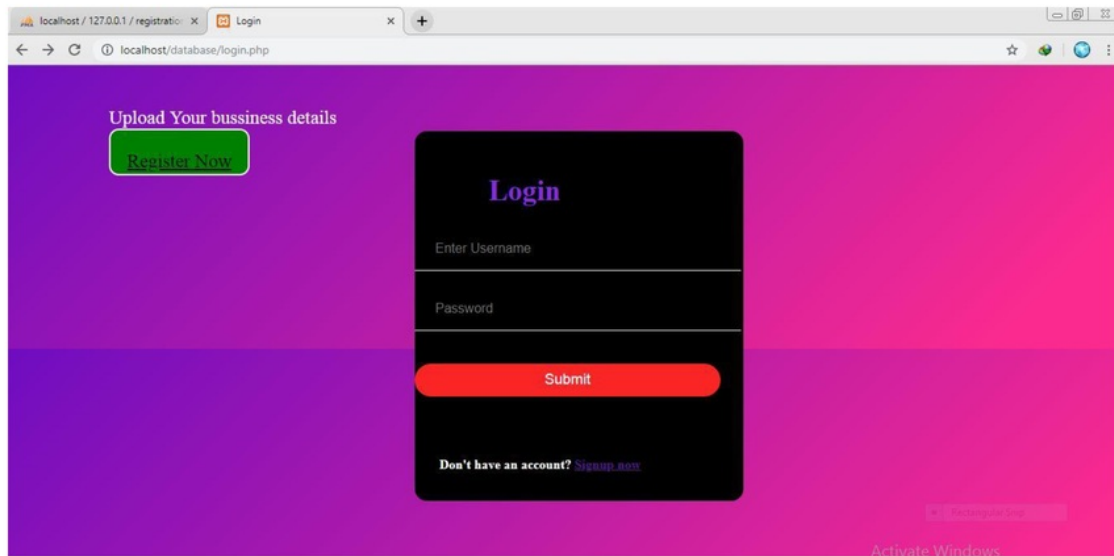

Specifications & conditions

- If someone tries to directly register their business without signup verification it would show them message and link to move to signup page.
- And this security check is through email: if the email typed in register form is not available in our database the user will be redirected to signup page.
- Secondly two password entered by the user i.e. password & Confirm password should same otherwise user will be displayed a message “two passwords should be same”.
- A successful submit of data will updated to the signup table of registration database.

➤ Login

The login page is for all those dealers who want to make any change in their details uploaded .it has a button down the box asking the user for signup link if they don't have an account.

Specifications & conditions

- User must have their credentials already stored in the database of the developer.
- If the entered username and password matches with the data stored in the database, the user will get a message of successfully logged in.
- otherwise it will ask to enter again with correct login details.

➤ Register of business

The register page is for the dealers and for the workers. the page includes the form and the movement to homepage button. It includes all the basic details of the dealer's ad their phone numbers followed by the RC number of the vehicle.

Software & Tools Used

Web content writing

The web structure is designed using <html> and some other scripting languages. Throughout website is divided into three phases till now

First phase: Basic Marketing website where we are going to take the details of various transport companies, small dealers, skilled & Unskilled workers. We are going to make platform for all of them to share their skills and make themselves employed according to their knowledge & ability.

<div > it represents the division attribute for a particular section in the webpage.it gives the developer an area there they can display the content as per them using variety of other attributes like <id> & <class>.

<form> was used to create different forms available on the site for different users like dealers, workers, & visitors. It has key attribute <method> whose value decides whether the developer wants to submit the details of form on the database or display it on the webpage.

The homepage is included with a list of all features available on the site

 tag is used to represent that list and each item in the list is represented by a anchor <a> tag.

<href> Each anchor has a references page where it will redirect to user after getting clicked using <href> tag.

Secondly we have different pages for joining all of them together on our site using Sign up, Login & Register page.

These pages have some input field<input> and a submission button<button>

 it represents the image to be added in the site.

Different content of site was written using different text format.

<h1> for the bold and main heading of the pages.

<h2> for the sub topics and menu bar links used.

<p> for the writing the content in paragraph as used in content of privacy policy and some other information which we are going to display on the different forms and search engines.

Content styling

The second part of FIRST PHASE is the styling of different pages and forms available on the website.

We have used CSS to do the styling of these items. The styling used in these website is inline stylesheet

i.e. we have separate design for every page and their codes are separately designed in same page with the content. Reason for this was different interface of pages added in site.

The content of all pages are display with same background color designed by me using attribute

<background color=linear-gradient(135deg,rgb(110,13,193) 0%,rgb(250,42,143) 100%) >

**** these font family are used to style the content of every page.

<hover> is used to change the styling any link whenever someone moves cursor over that portion.

JavaScript is used to make the slideshow and navigation bar used to display the features and specifications of transport availability.

We defined a separate function for two operations performed within this slideshow

<script > is used to write coding of JavaScript within the php file.

“function **plusIndex(n)**” represent the next image in the slideshow as per the developer.

“function **showImage(n)**” represent the displaying the images in the slideshow after a particular duration of time.

x[index-1].style.display="block" used to display the images in blocks representing particular area of page template.

Database designing

Xamp server phpmyadmin was used by us to design the database of our site.

The whole record of our database is named as REGISTRATION which include three different table

➤ Signup

- The database includes four input field which are mandatory for the user to signing up to our site. These are mentioned in content writing paragraph of this report.
- The primary field is unique “email” whose verification is important for the user.

➤ Dealers

- The database includes 10 different input field which are mandatory for the dealers to upload their transport description on our site. These are mentioned in content writing paragraph of this report.
- The primary field is unique “email” whose verification is important for the user They entered “email” used while signing in must be same as in register database table. any discrepancies will lead to mismatch to data and the dealers content details will be discarded.

➤ **Newsletter**

- The database includes five input field which are mandatory for the user to sending their issue to us. These are mentioned in content writing paragraph of this report.
- Nothing is primary in this form. any user can send their problem to us.

Database entry

The input of html form to database is performed by using php in backend process.

“**\$POST**” is used to submit the form details of user to database by performing some security check up these securities check when passed data is successfully uploaded in the database of the developer.

"**SELECT * FROM table name WHERE field1 ='Svar1' && filed2='Svar2' "** is used to display the data or search the data from the database at some conditions.

Ongoing support and maintenance

Our organization is continuously working on the update of website so that we can connect more & more rural area people over time. Since we are working on the Cpanel of Linux hosting so our site is not going to deteriorate if not regularly updated. Secondly there is no change in performance compatibility.

1

BROWSER AND DEVICE SUPPORT

Websites can be viewed on a wide range of devices and browsers. We have designed this site to be viewed on every type of browser mentioned below:

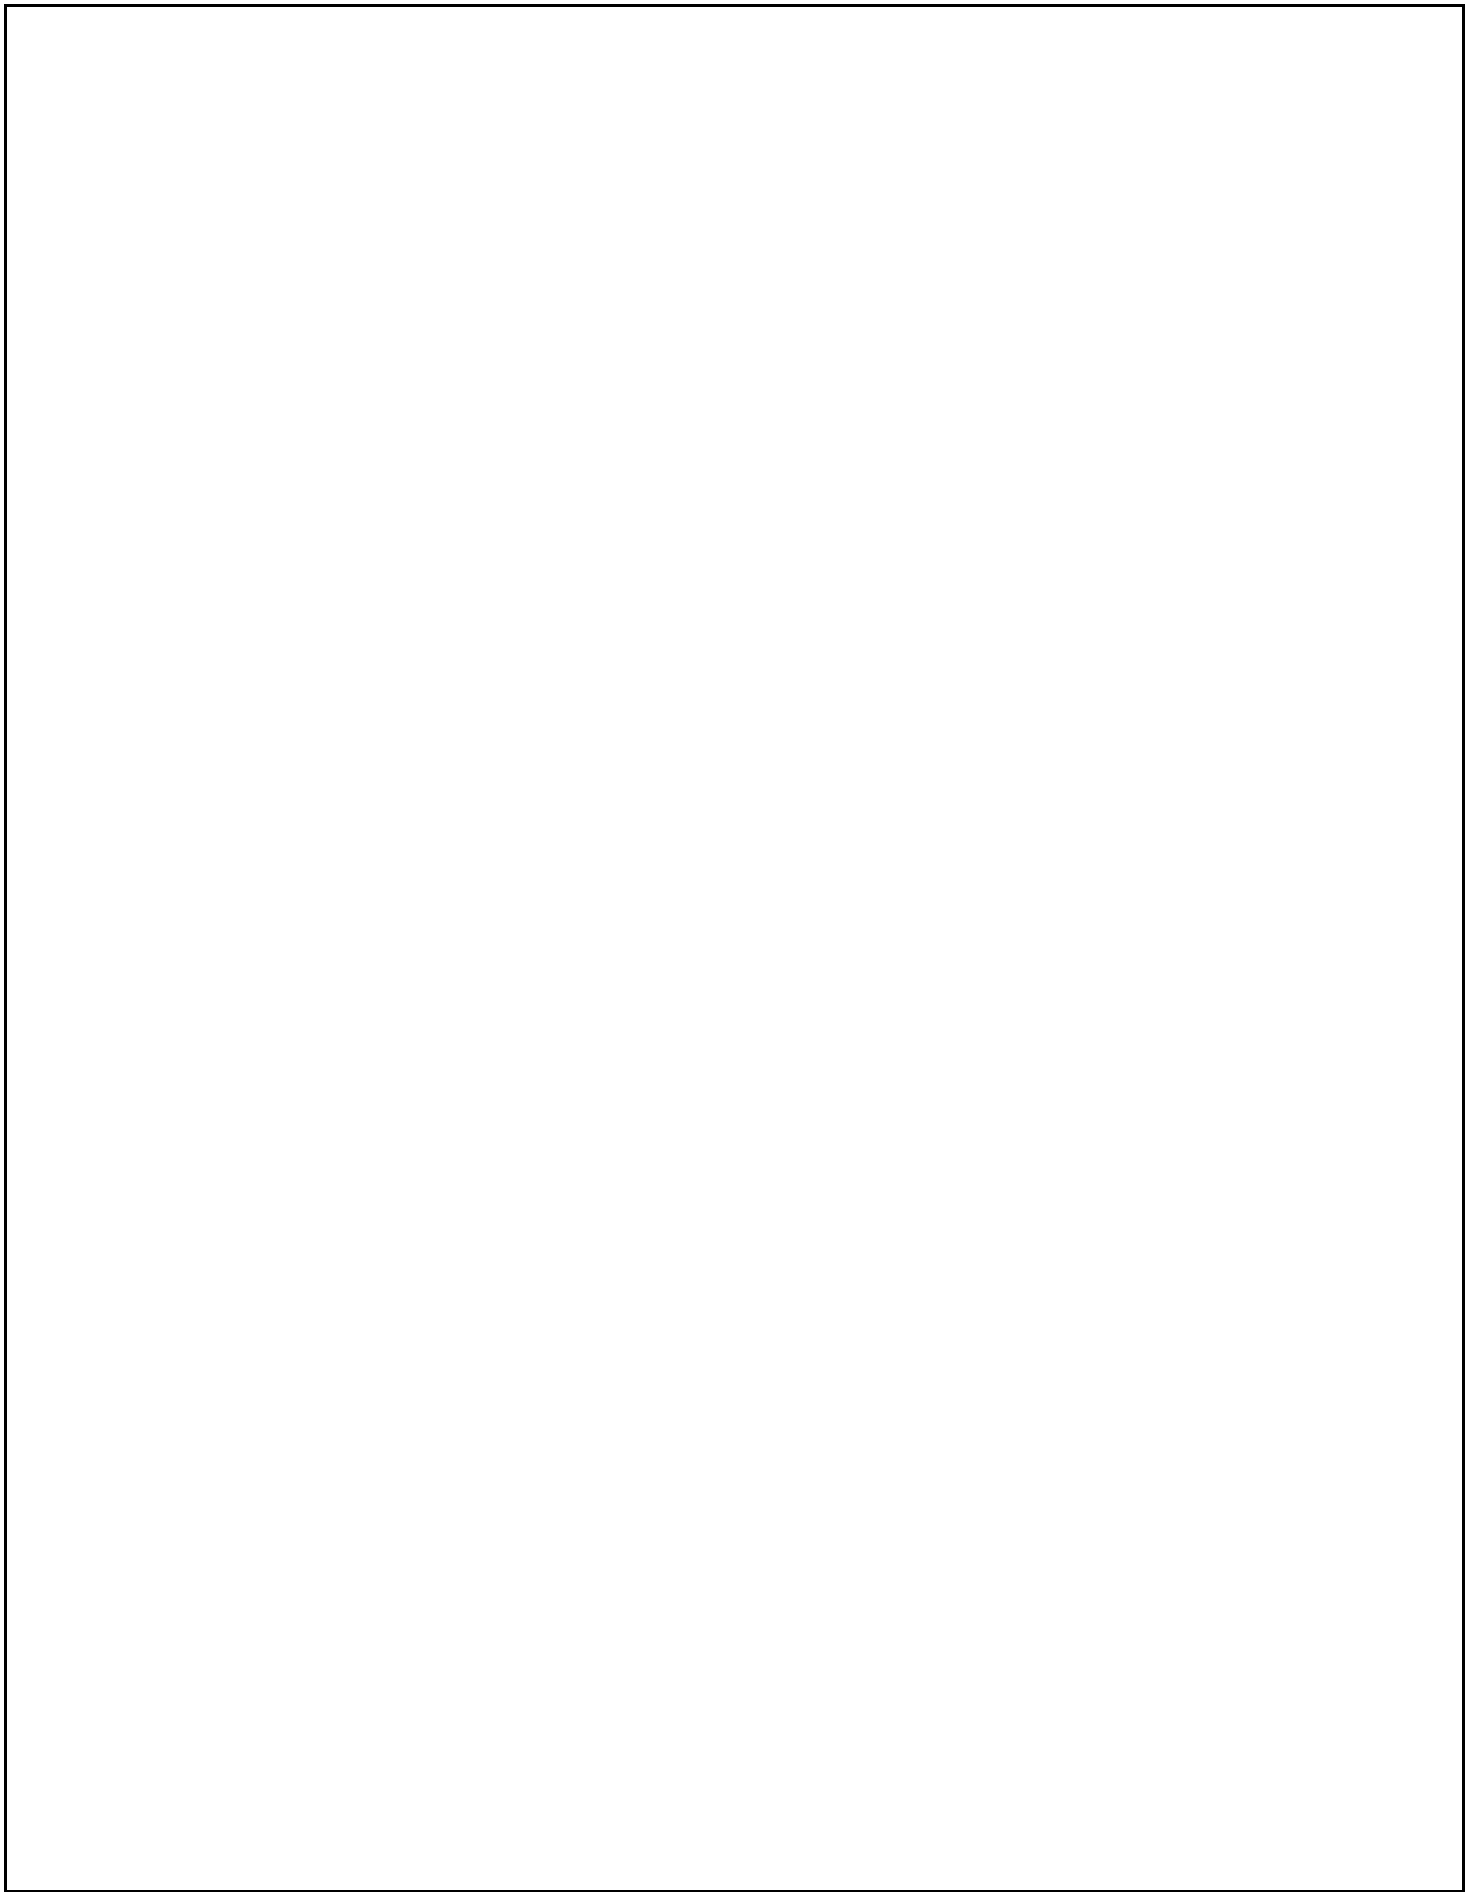

- Chrome
- Safari
- Firefox
- Internet explorer
- Edge
- Opera
- Android web view
- Mozilla compatible engine

DOMAIN & HOSTING

The hosting & domain this site is bought from GO daddy domain and hosting provider.

Domain: MEETYOURNEEd.IN

Hosting: go daddy hosting from Linux server.
